EDUCATION

Poolesville High School : SMCS Magnet Program — **Poolesville, MD**

Expected High School Diploma | Unweighted GPA: 3.93 — *August 2024 – June 2028*

Completed Coursework: Magnet Analysis (post-BC calculus), AP Calculus, AP Computer Science A, AP Biology, AP U.S. Government

Junior Year Coursework (2026–27): Linear Algebra, Discrete Mathematics, Applied Statistics, Introduction to Artificial Intelligence, AP Physics C (Mechanics & E&M), AP English Language, AP World History

RESEARCH EXPERIENCE

Algoverse AI Research Program — **Remote**

Student Researcher, PathoReason: Explanation Faithfulness in Pathology VLMs — *May 2026 – Present*

- Co-authored a study testing whether pathology vision-language models' cited histological evidence actually drives their diagnoses, using a grid-referenced localization and occlusion protocol on the MHIST colorectal polyp benchmark.
- Designed and ran the perturbation experiments: in a pre-registered replication on 427 held-out tiles, masking the regions a model cites changed its diagnosis more often than masking control tissue (130 vs. 79 tiles, sign test $p = 5\times10^{-4}$).
- Found that stated features track the label: they matched the model's own diagnosis in 45 of 46 cases but expert consensus only at chance, and reversing explanation/classification order flipped 41 of 100 predictions in one direction with zero reverse flips (McNemar $p < 10^{-10}$), replicated on a second inference host.
- Built the full evaluation pipeline: grid-based evidence localization, biological-structure masking (stain deconvolution, nuclei segmentation), and statistics across 7,600+ model citations; no VLM tested passed a pre-registered competence bar.

MoCo Innovation — **Montgomery County, MD**

Acting President — *2024 – Present*

- Taught hands-on STEM classes to elementary students at Clarksburg Elementary School through a nonprofit serving underrepresented communities.
- Designed the lesson curriculum and instructional materials used in classroom delivery.

PROJECTS

AUMP: Machine Learning Early-Warning System for Bradycardic Deterioration

Sole Developer • PhysioNet Credentialed Researcher

- Built an early-warning system for relative bradycardia (a sustained fall of at least 20% below a patient's own 6-hour heart-rate baseline) from ICU heart rate, using credentialed access to MIMIC-III and MIMIC-IV.
- Validated with patient-level splits on two cohorts: 3,400 patients with 1/min heart rate and 65,365 with hourly charted vitals.
- An LSTM beat a logistic-regression baseline at every 5–60 min horizon (paired patient-clustered bootstrap CIs exclude zero) and roughly doubled NEWS2's detection at matched false-alarm budgets.
- Found and fixed three measurement defects that had produced confident wrong results (a duration-rounding bug, pooled cross-validation AUPRC, a saturated false-alarm median), plus a label collision and patient leakage.

BUMP Labs : Wearable Closed-Loop Cardiac Response Device

Co-Founder • bump-labs.com • Patent Pending (USPTO provisional #63/686,176)

Co-developed the original concept for a wearable atropine pump treating crashing bradycardia and contributed to the device codebase. Currently building an early-stage venture around the system, integrating the AUMP machine learning prediction layer with the BUMP hardware to create a closed-loop predict-and-treat platform.

Comparative Analysis of Digital Tools and Traditional Teaching Methods

Published Research Paper • arXiv:2408.06689 • Second Author

Co-authored a controlled study of 30 elementary students evaluating math skill gains from interactive digital platforms against worksheet-based instruction. Contributed to study design, assessment administration, and data analysis. Digital-tool students improved 24.2% on average versus 8.3% for the control group, demonstrating measurable gains from technology-assisted instruction.

Falconwing : EMG-Controlled Robotic Prosthetic Arm

Built a 3D-printed, Arduino-based prosthetic arm using MyoWare EMG sensors to translate real-time muscle signals into a controlled grasping mechanism.

ACTIVITIES & SKILLS

- **Activities:** Taekwondo : Black Belt, Han Mi Martial Arts (Damascus, MD); Model United Nations : Delegate; 200+ volunteer service hours
- **Programming Languages:** Python, Java
- **ML & Data Science:** Scikit-learn, PyTorch, Pandas, NumPy, Hugging Face Transformers, Matplotlib
- **AI & Agentic Systems:** Vision-language model evaluation, LLM function calling & tool use, prompt engineering, causal perturbation analysis
- **Statistical Methods:** Time-series feature engineering, hypothesis testing (Wilcoxon, McNemar's, bootstrap resampling), patient-level cross-validation, ROC/AUPRC evaluation
- **Tools & Environments:** Git/GitHub, Jupyter Notebook, Kaggle, Google Colab, Arduino, PhysioNet/MIMIC
